Description

Proclinic Expert Bulk Fill is a light cured, radiopaque composite that adopts a systematic and scientific approach to shade arrangement. *Proclinic Expert Bulk Fill* composite can be cured to a maximum of 5 mm in 20 seconds with an LED curing light or 40 seconds with a halogen light. *Proclinic Expert Bulk Fill* composite is available in 4 g syringes and 0.25 g unit dose capsules. *Proclinic Expert Bulk Fill* was evaluated by nine editors in 345 uses. This composite system earned a 91% clinical rating.

Clinical Observations

Instructions/Packaging

Syringes and capsules of *Proclinic Expert Bulk Fill* are labeled completely with name and expiration date. Unit-dose capsules are boxed in clear plastic containers that are easy to store.

Handling

Proclinic Expert Bulk Fill nano-hybrid composite handles extremely well. The viscosity has sufficient body for packing without being too stiff. Sculpting anatomy can be done with no sticking of the instrument to the composite.

Consultants' Comments

"The handling properties of Proclinic Expert Bulk Fill are very good."

"Proclinic Expert Bulk Fill has a 5 mm depth of cure."

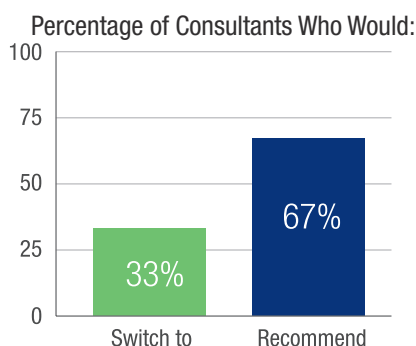

"Capsule design and color coding are perfect."

"Final esthetics was great."

"Shading in a typical posterior tooth is not crucial and this bulk-fill composite blends very nicely with moderately sized fillings."

Esthetics

Proclinic Expert Bulk Fill shades blend well with the tooth, and they all polish well. *Proclinic Expert Bulk Fill* is fairly translucent but was reported to be acceptable for most posterior applications.
